Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name: SHEIK MOHAMED M

Reg. No.: 192511145

Course Code: CSA1013

Slot: B

Course Name: SOFTWARE ENGINEERING

Course Faculty: DR.LATHA

Project Title: AI-POWERED MULTI-MODAL LOGISTICS AND TRANSPORTATION OPTIMIZATION PLATFORM

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

Project Description: Module 3: Appointment Scheduling & Hospital Resource Management

Project Description: The **Appointment Scheduling and Hospital Resource Management** module is an important part of a hospital management system that focuses on organizing patient appointments and efficiently utilizing hospital resources. The module allows patients to schedule appointments with doctors by selecting their preferred department, doctor, date, and available time slot. The system checks the doctor's availability and confirms the appointment without creating conflicts or duplicate bookings. Hospital staff can view, modify, reschedule, or cancel appointments whenever required. It also maintains information about doctors' working schedules, consultation rooms, medical equipment, and other hospital facilities.

The module helps hospitals manage resources effectively by assigning available rooms and equipment according to patient requirements and doctor schedules. It can identify unavailable or occupied resources and prevent the same resource from being assigned to multiple patients at the same time. Appointment reminders and notifications can also be provided to patients and doctors to reduce missed appointments. By automating these activities, the module reduces manual paperwork, minimizes waiting time, improves communication, and increases the overall efficiency of hospital operations. It also helps hospital administrators monitor appointment schedules and resource usage, enabling better planning and decision-making. Overall, this module provides a **systematic, reliable, and efficient approach to managing appointments and hospital resources while improving the quality of patient care.**
